BlueWave Communications

THE Island's Communications Provider

Why Choose A BlueWave Private Circuit?

Traditional broadband gets slower the further you are from the fixed-line network. What bandwidth you have left is then shared between 20 or 50 other users; that's called contention and it's what makes your broadband slower at peak-times. If something does break, it can also take days to fix.

A private circuit eliminates these problems by providing dedicated bandwidth with no contention and if something does go wrong, it's fixed within hours. If your business cannot trade whilst offline, then a private circuit is essential.

Additionally, with symmetric bandwidth as standard, uploading files is just as quick as downloading. That means cloud services work perfectly every time.

Not All Networks Were Created Equal

We're the Island's best choice for private circuits; connecting leading e-gaming, data-centre & financial institutions with high quality connectivity at fixed, low prices. Available Island-wide, even outside existing coverage areas.

Our standard SLA is also the highest on the Isle of Man at 99.9%.

Furthermore, we have in-house degree level expertise in cyber-crime and security ensuring our network remains completely secure end-to-end.

Need More Bandwidth?

No problem. We offer private circuits with bandwidths of 10, 100 and 1000 MBit/s. That means no matter how much you need, our network can connect you at a speed/price point unavailable from any other network.

Let's Talk!

Our dedicated business sales team is waiting to hear from you on 640620.
